Shepherd Fuse Bonded PVC-coated wire begins with high-quality galvanized steel wire which is twisted or welded into a tough, strong mesh. The mesh is then carefully cleaned and primed. The PVC coating is "fuse-bonded" to the heated wire mesh through a special, exacting process. This special process provides a strong, smooth, durable coating without pinholes or thin spots.

All meshes are shown approximate size. Mesh sizes listed are those most commonly used in these industries. Other mesh configurations, gauges and coil widths are available. In some cases, a minimum order quantity may be required.

Standard PVC color is black. Mesh may also be available in green, grey, orange, red, yellow, blue or additional colors. Mesh shown may be available galvanized only.
